Public Works News Release

MacIver Street Construction Update 1

Construction of the first phase of the MacIver Street Improvements project started Tuesday 9 October and is expected to last about two months. The exact timing will depend on weather and the timing of the second phase of the project.

The first phase of the project will extend the street pavement, a water line, a sewer line, and a drainage line to Spruce Street. Important improvements such as most curb, gutter, and sidewalk, will wait for the second phase of the project. The second phase of construction is scheduled to start construction in late November. The second phase of work will bring the full \$1.1 million MacIver Street Improvements project to completion. The two phases together will provide an essentially new street with sidewalks between Main Street and Spruce Street. Sewer, drainage, and water quality will also be improved.

This week a minimum of vegetation will be cleared for the construction of the street extension and the new roadbed will be graded. The grading should be completed next week and then work will start on underground sewer and drainage pipes in the extension area. Once complete on the extension, sewer and drainage work will continue on the existing street.

Since most of the early work on the project is confined to the street extension area, minimal traffic impacts are expected.
