Public Works News Release

Warren Street Utilities Construction Update 2

The focus of work on the City of Bishop water and sewer construction along Warren Street and intersecting streets is expected to move to the intersection of Lagoon and Warren next week and continue at that location for up to two weeks.

This week the contractor is expected to complete work on a new water line on South Street between Main and Fowler Streets. Next week the contractor plans to start major water and sewer work in the intersection of Lagoon and Warren. The work in the intersection of Lagoon and Warren is expected to close the intersection during the work day for the expected two week duration of work. Minor work is also planned along Warren near Lagoon over the next two weeks. Temporary water shutoffs will also be necessary during the work day for some operations. Notices of the shutoffs will normally be distributed two days in advance.

Following the completion of work in the intersection of Lagoon and Warren Street, the contractor is expected to move operations to North Warren. Work in this area includes the construction of water line the full length of Academy Avenue. All utility work is expected to be completed in December. Construction of street improvements along Warren Street is expected to start as early as January and last into May 2015.

This construction in downtown Bishop impacts traffic on city streets west of Main Street and will cause inconvenience and delays. Closures include full intersection closures. When intersections are closed, you will not be able to get through the intersections. Equipment, workers, excavations in the street, and uneven pavement will require attention, even when work is not underway. All efforts will be made to maintain access to businesses and to minimize the impacts and restrictions, but drivers, riders, and pedestrians should be cautious, take alternate routes, and be patient.
