Public Works News Release

Mac Iver Street Construction Update 4

Most of the trenching on the old section of Mac Iver Street is complete and work is about to shift back to the street extension part of the Mac Iver Street Improvements project. Paving the extension is planned for the first week in December. The full project will not be complete until the spring of 2008, but the new street extension should be open to traffic over the winter.

The complete \$1.1 million Mac Iver Street Improvements project will extend Mac Iver Street to Spruce Street, repave the existing street, provide continuous curb, gutter, and sidewalk from Main Street to Spruce Street, extend water and sewer lines, and install a storm drain. The project is constructed in two phases with the end of the first phase and the whole second phase to be constructed next spring.

A little bit more trenching will be required on the existing street and then the trenches will need to be patched before winter sets in. While this work is underway on the existing street, equipment, workers, and trenches in the street require attention from drivers and pedestrians and cause short delays. These impacts should be much less than they have been in recent weeks however.
