## **Public Works News Release**

### **Park Path Construction Update 2**

Construction of the City of Bishop Pine to Park Path project is expected to continue next week with placement of concrete. Work is progressing rapidly and could be almost complete before the week is out. Visitors to the back of the Bishop City Park, including the Bishop Community Garden and Spruce Street near the Senior Center, should avoid the construction area, especially when work is underway.

The Pine to Park Path project is constructing an approximately 1,000 foot long paved pedestrian and bicycle path. The path will extend from the north end of two existing alleys north of East Pine Street past the Bishop Community Garden to the existing paved path in the park near Spruce Street. The new path will be 8-feet wide with 3-foot unpaved shoulders. Path construction in the area of Spruce Street will include construction of sidewalk and on-street parking improvements.

The first week of work on the project included clearing the site, grading, and placing gravel base. With that work almost complete, the project is ready for the placement of concrete. Concrete on the project will be colored to provide a more natural look. Once concrete work is complete, all that will be left to do on the project is paving on Spruce Street and project clean up. Paving is expected as early as next Friday.

During the construction period, access to some parts of the park, including the Community Garden and Spruce Street, will be affected. It is expected that continuous pedestrian access will be available to the Community Garden, although gardeners are urged to avoid visits when the contractor is working. Care and patience from park and garden visitors is appreciated during the construction period.
