Public Works News Release

Construction of Warren Street Improvements Starts Tuesday

Construction of the City of Bishop Warren Street Improvements project is expected to start next Tuesday, 20 January and last until May. The contractor plans to start work with construction of a storm drain near the intersection of Lagoon and Warren Streets. The contractor plans to start work on the sidewalk in the block of Warren between Line and Church streets the same day.

Storm drain construction is expected to start Tuesday with the installation of a large underground vault on Warren near Lagoon street. After that, the construction of a storm drain pipe is expected to proceed north along the east side of Warren Street to near Pine Street. Storm drain construction should take about one month to complete. Storm drain construction will require the demolition of existing concrete curb, gutter, and sidewalk along the east side of Warren Street. This existing concrete will be replaced as a part of the project.

The project includes the construction of new colored concrete sidewalk, curb, and gutter along Warren Street between Line and Pine Streets. Existing concrete in this area will be removed as part of the work. Concrete removal and construction of new concrete is expected to start Tuesday on the west side of Warren Street between Line and Church streets.

Construction in downtown Bishop impacts traffic on city streets west of Main Street and will cause inconvenience and delays. Closures required for the construction include full street and intersection closures during the daytime. Equipment, workers, excavations in the street, uneven pavement, and other hidden hazards will require attention, even when work is not underway. Businesses will still be open to serve you during construction. All efforts will be made to maintain access to businesses and to minimize project impacts and restrictions. Drivers, riders, and pedestrians should be cautious, take alternate routes, and be patient.
